

In 2016 alone, the IUCr sponsored 40 international meetings and schools and 5 OpenLabs in Albania, Bolivia, Cambodia, Cameroon and Uruguay

These charitable activities have, over the years, enabled 1000s of students and young scientists to travel, receive expert tuition, present their work and make lasting collaborations

Today, many of these beneficiaries lead their own research groups, publish their work and contribute towards the advancement of crystallography

The IUCr even encourages the very young with its annual international crystal-growing competition for schoolchildren

Now, by joining the **IUCr Associates Programme**, you can formally be a part of this proud tradition AND receive a variety of benefits
