The Research Centre, Řež

Postdoc with experience in TEM analysis of materials.

The position requires a good background in transmission electron microscopy, spoken and written fluency in English, experience in writing articles and reports, and participation in conferences. Experience in nuclear materials research would be an advantage.

The Postdoc will work in an interdisciplinary, motivated research team, interested in innovative and challenging materials. The Research Centre Řež offers several employee benefits, including pension and life insurance allowances, five weeks of holiday, the possibility of flexible working time, training and education, and a performance-based bonus.
